Indydotinfotech PVT. LTD.	Patna, Bihar

- Worked as a Full Stack Web Developer, managing both front-end and back-end development using PHP and its frameworks, ensuring client requirements are met with industry-standard best practices.
- Developed multiple backend projects, including College Management System, E-commerce, and School Management System, focusing on performance, security, and seamless user experience.

PROJECTS

HKS Party – Online Event Booking, Employee and Vendor Management Platform.

HKS Party is a feature-rich event booking and party planning platform that enables customers to seamlessly find and reserve venues, catering, select menus options with packages and entertainment services. The platform not only facilitates bookings but also includes employee and vendor management functionalities, allowing businesses to efficiently manage their workforce, assignments, and schedules.

Tech Stack Laravel, PHP, SQL, API Integration, Social Login (Google/Facebook), JavaScript, Bootstrap, Razor Pay(Payment)

Tech challenges Implemented a four-tier role system (User, Vendor, Staff, Admin) where Admin assigns roles, manages clients, and converts leads, ensuring structured access and workflow efficiency.

Echelon Realtors (I) Pvt. Ltd. (ERPL)

(ERPL) is a real estate platform specializing in providing genuine and verified properties for rent and sale in Location nearby in India. The platform offers a diverse range of property listings, including commercial spaces like ready-to-fit-out offices and residential options such as brand-new flats. Users can easily search for properties based on budget, locality, property type, and amenities, ensuring a hassle-free experience in finding nearby listings.

Tech Stack Laravel, PHP, SQL, API Integration, JavaScript, Bootstrap, Leaflet JS(Maps)

Tech challenges Map-Based Property Visualization: Integrate an interactive map feature that plots all available properties, allowing users to visualize property locations geographically. This would aid in assessing proximity to amenities, transportation links, and other points of interest, thereby facilitating more informed decision-making.

Brands and Branches – Franchise Discovery, Business Expansion Platform.

Premium Franchise and Locations – Franchise Discovery and Business Expansion Platform.

Both projects are franchise consulting platform that connects aspiring entrepreneurs with premium food and beverage brands. It allows users to explore franchise opportunities across various categories, including cafes, lounges, restaurants, pubs, and nightclubs. The platform facilitates end-to-end franchise acquisition, from brand selection to business setup and operations.

Tech Stack Laravel, PHP, SQL, API Integration, JavaScript, Bootstrap, Razor Pay(Payment)

Tech challenges Implemented a customizable franchise management system where each franchise owner can design their own pages, select color patterns, and manage content dynamically. Integrated a priority-based franchise listing system, allowing featured franchises to be highlighted based on admin-defined rankings, ensuring better visibility and lead conversion.
